SENASICA monitorea al vector y plantas sintomáticas

Virus de la Tristeza de los cítricos

Ramírez-Pool et al., 2021, 2022.

Cinvestav

Naranja dulce infectada con CTV en Veracruz, México.

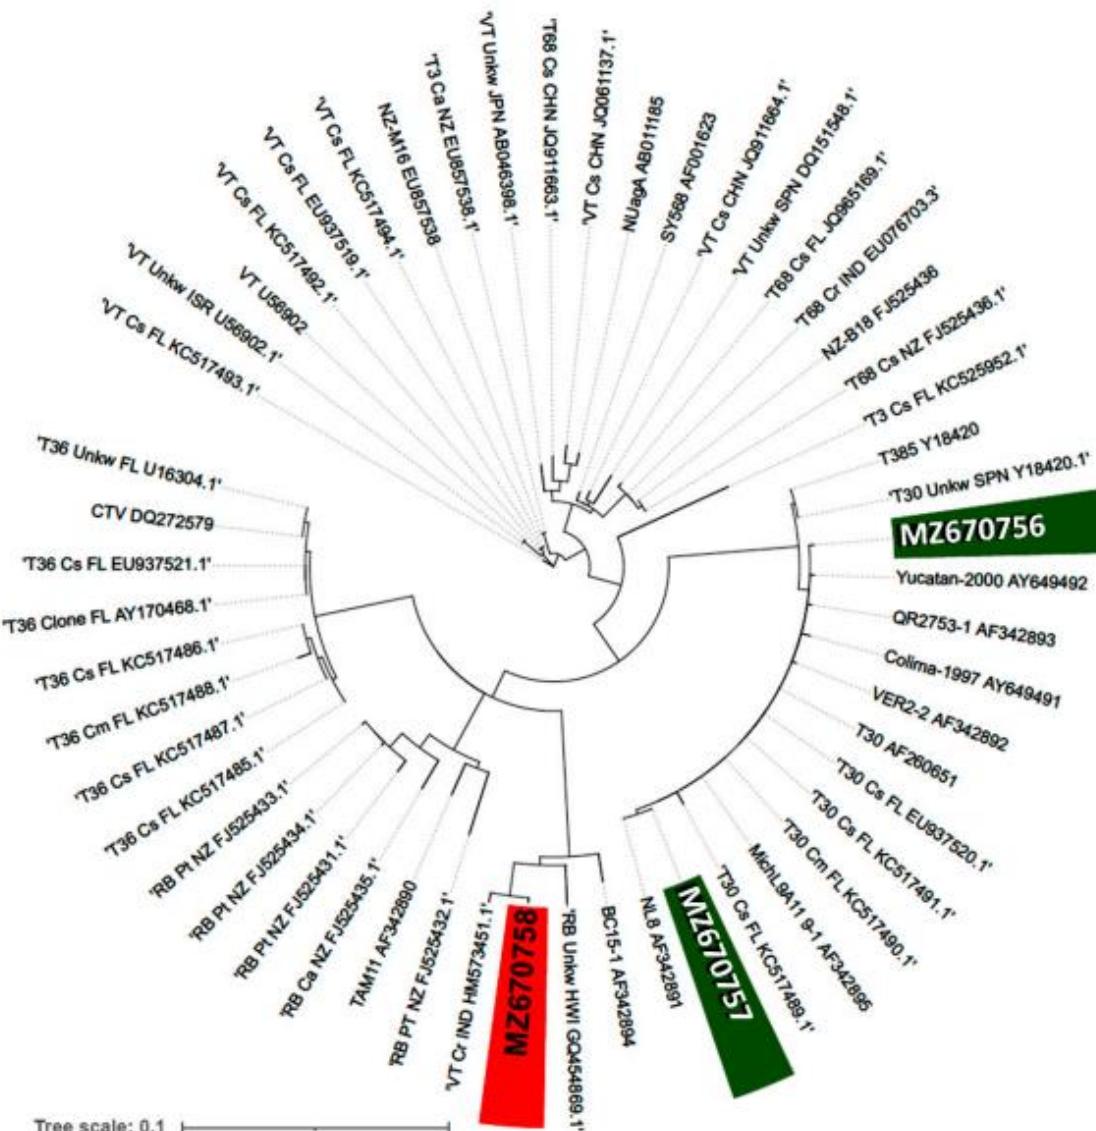

CTV atenuada

CTV severa

Filogenia de aislados de CTV basados en CP

Transcripts Per Million of CTV Genes

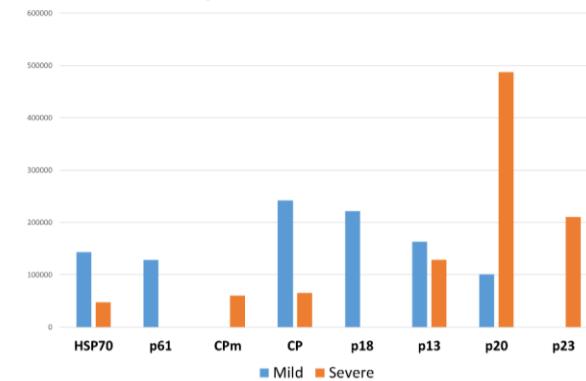

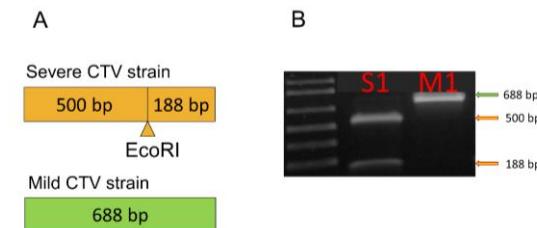

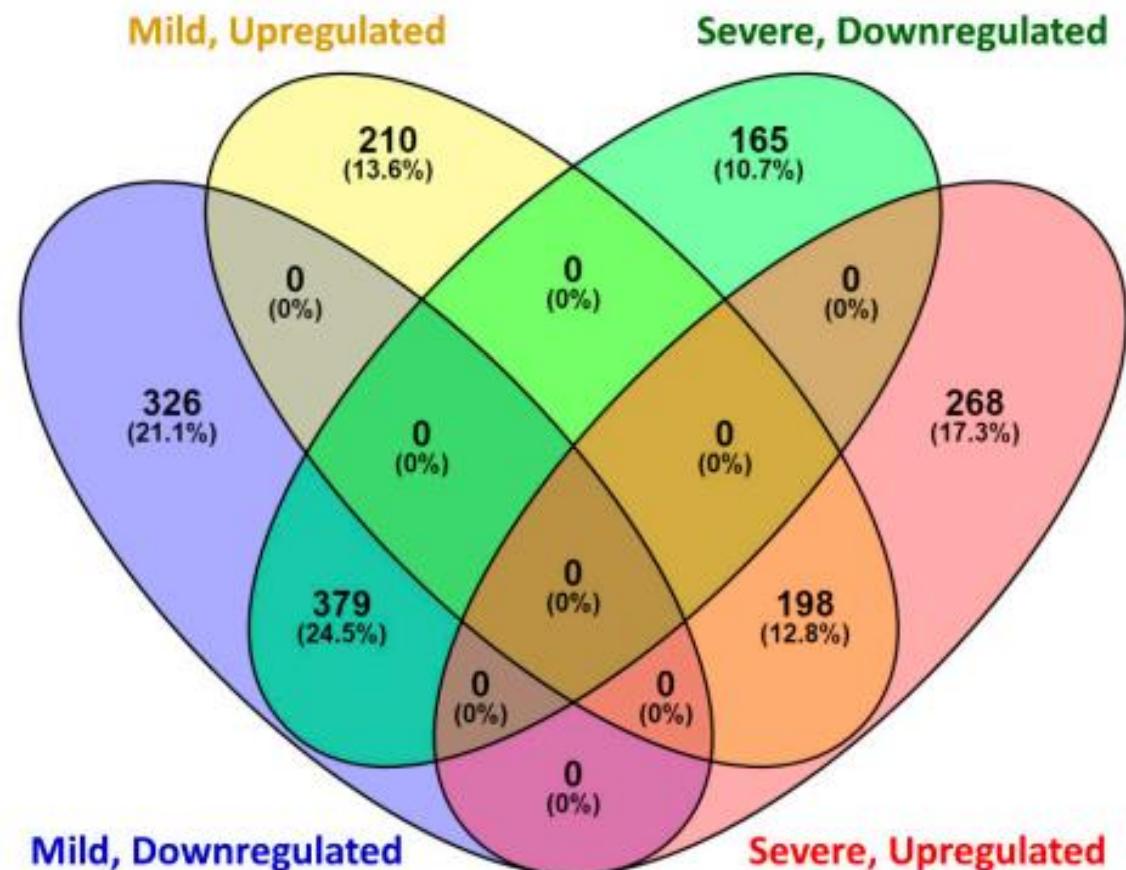

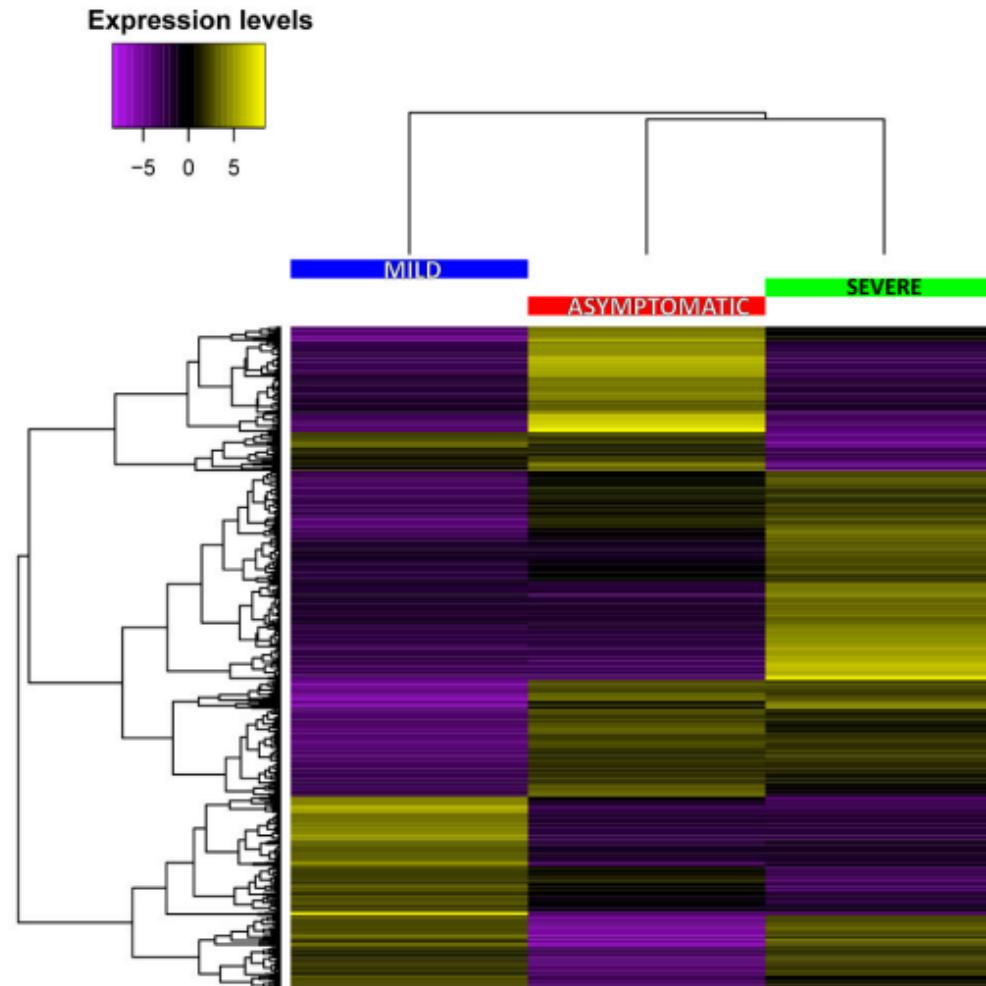

Figure S5. Comparison of viral ORF transcripts per million reads obtained in plants infected with either mild (blue) or severe (orange) CTV strains. Gene description: HSP70H, Hsp70-homolog; p61, 61-kDa protein; CPm, minor capsid protein; CP, major capsid protein; p18, 18-kDa protein; p13, 13-kDa protein; p20, 20-kDa protein/RNA silencing suppressor; p23, RNA silencing suppressor.

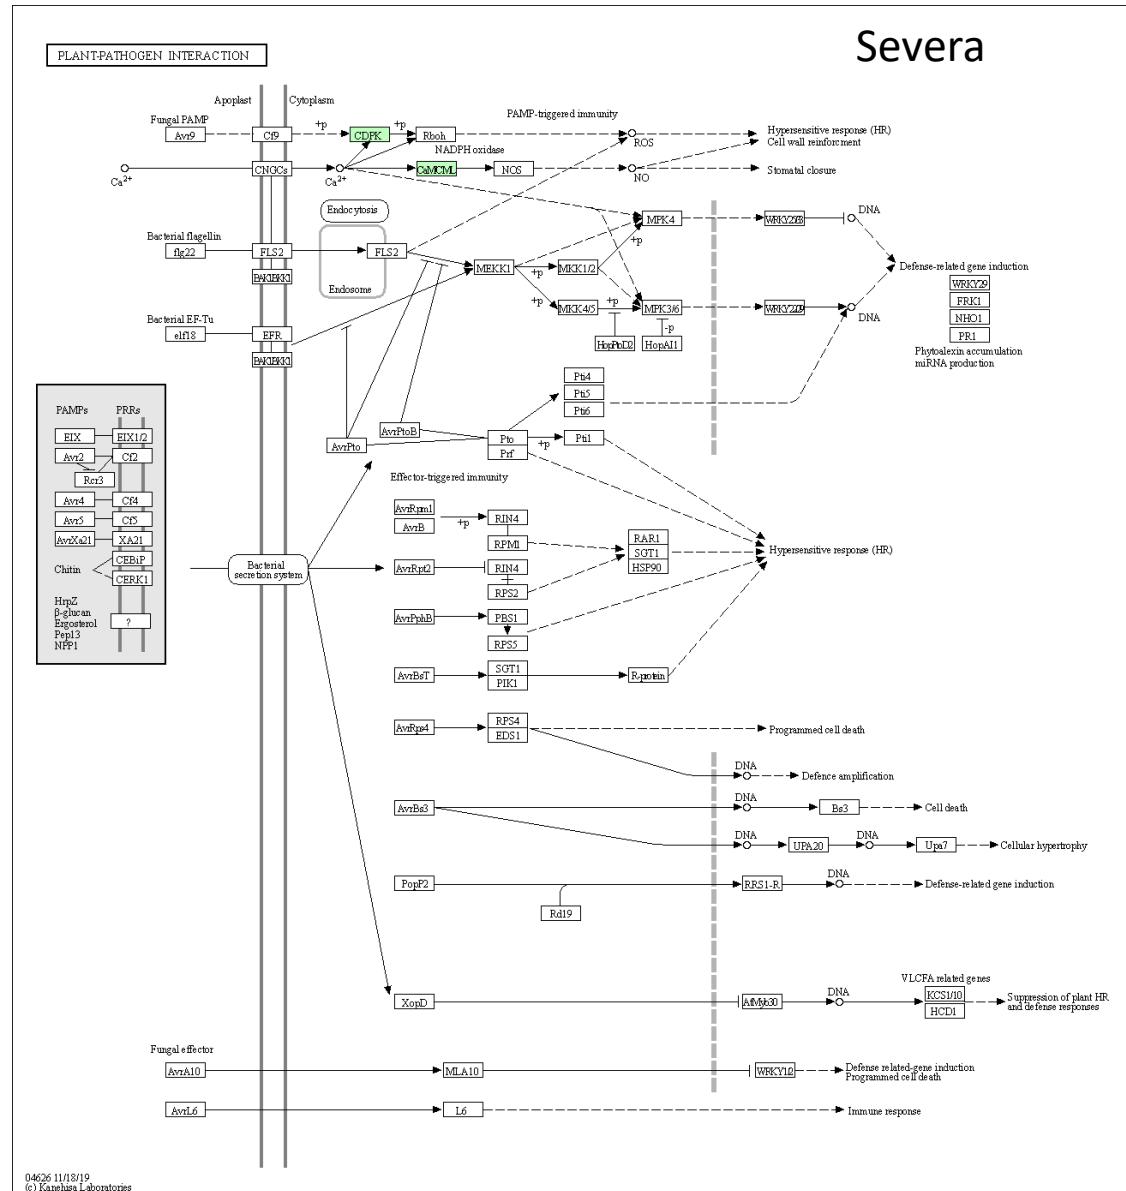

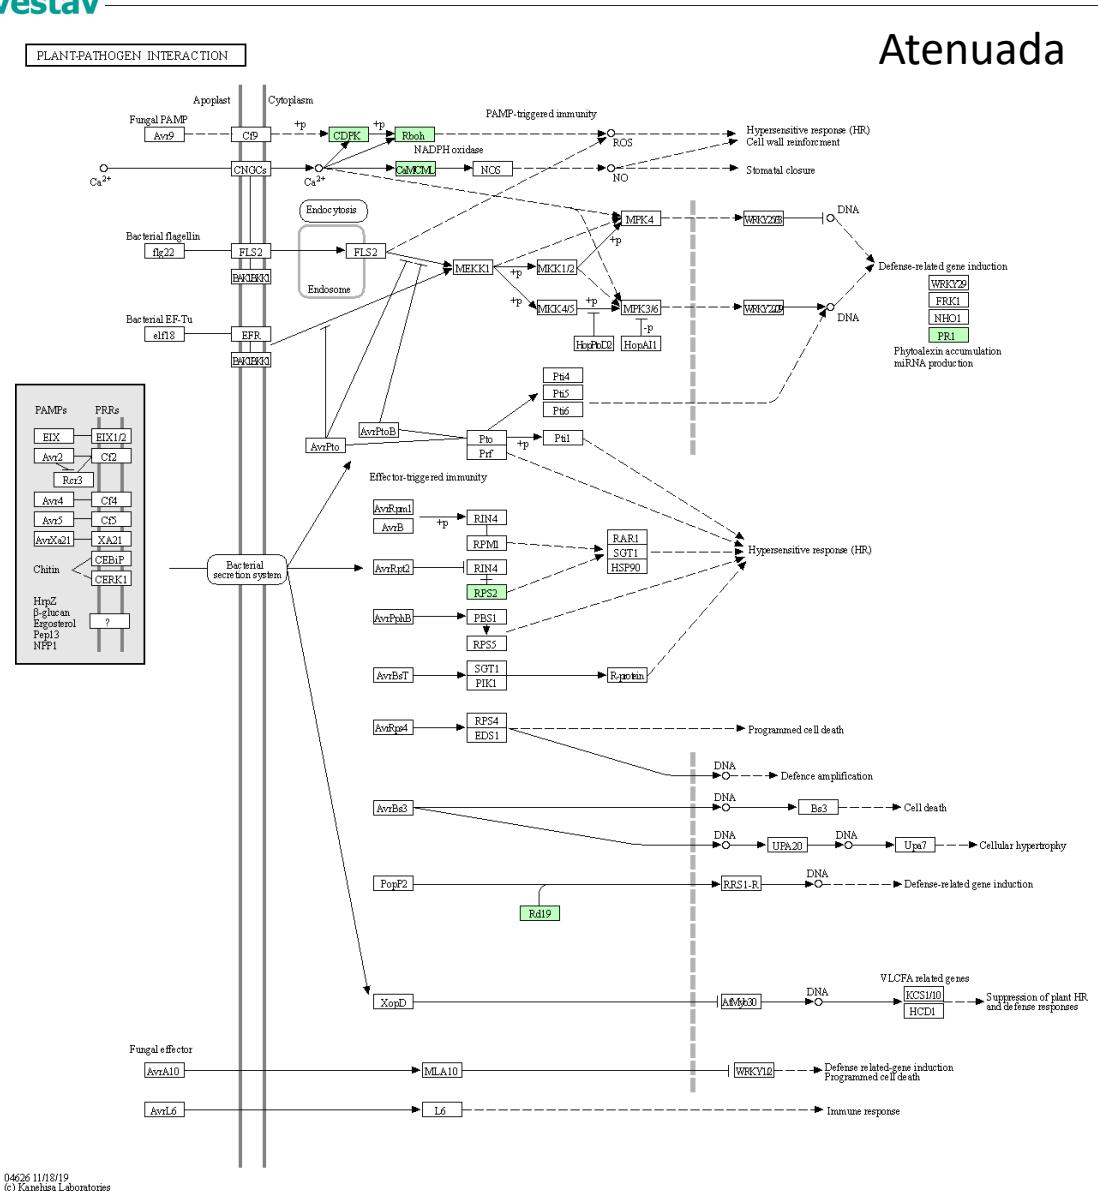

Identification of severe or mild CTV strain by digestion with EcoRI restriction enzyme.

Expresión de genes en *C. sinensis* con CTV

Transcritos sobreregulados en la interacción planta-patógeno

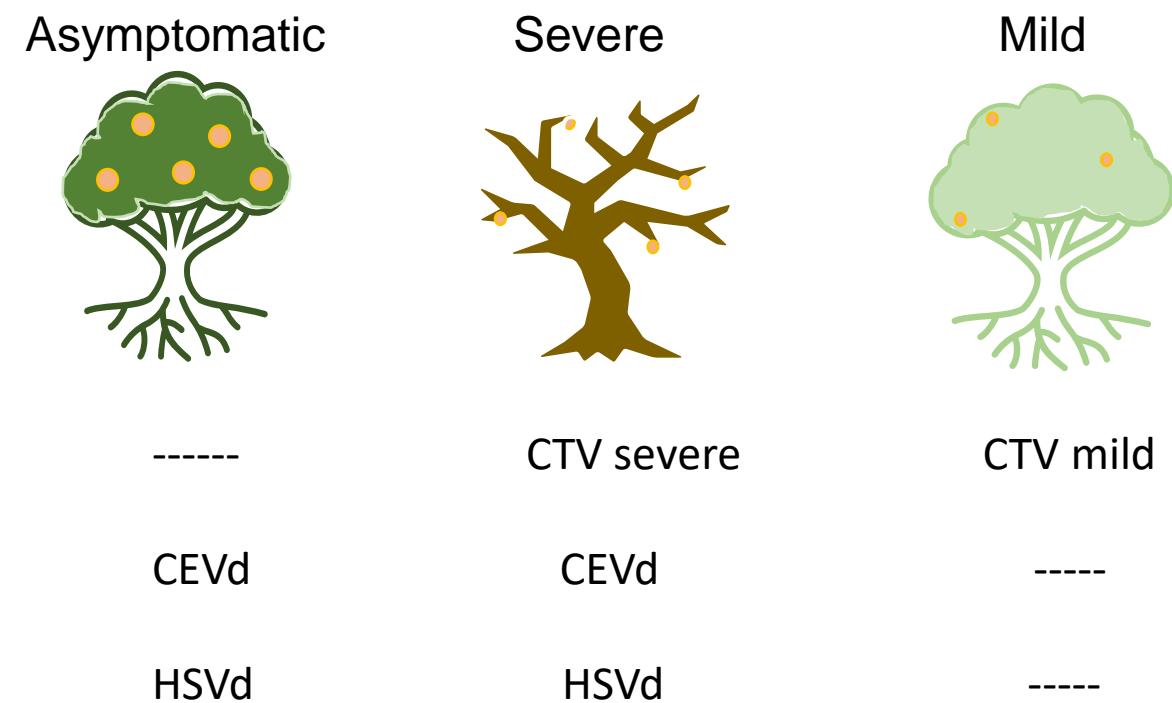

Presencia de los viroides Exocortis y Hop stunt

Table 1. Number of reads of *Citrus exocortis viroid* and *Hop stunt viroid* in asymptomatic and CTV-infected orange trees.

Condition	TPM *	FPKM **
<i>Citrus exocortis viroid</i>		
Asymptomatic	1,000,000	4,528,301.89
CTV severe isolate	1,000,000	4,244,325.52
CTV mild isolate	0	0
<i>Hop stunt viroid</i>		
Asymptomatic	1,000,000	5,813,953.49
CTV severe isolate	1,000,000	5,639,097.74
CTV mild isolate	0	0

* The normalized expression profile is shown as TPM (transcripts per million). ** FPKM: fragments per kilobases of contigs per million mapped reads.

Cítricos produciendo antimicrobianos para mitigar HLB
